Development draft – not for fabrication.
Requirements: design/ereader_requirements.md
Tracking: GitHub epic #821.

DRAFT: Existing processor units retained. Signal allocation and clocks/debug wiring are not yet complete.

I/O DECOUPLING – 100 nF AT EACH NUMBERED VCC / VSS PAIR

VCC and VCC2 use 3.3 V. All returns use one board ground plane. VBATT follows the main rail; no separate backup-cell supply. Analog references use AVCC0 / AVSS0. Place bypasses at named ball pairs. USB/MIP1 supplies remain on the interface sheet and are not yet wired. HUM Rev.1.30: Table 69.2 p.4042; unused references: section 21.4 pp.861–862. This is an electrical draft; capacitor MPN qualification remains open.
